## EDUCATION

### CHHATTISGARH SWAMI VIVEKANAND TECHNICAL UNIVERSITY (CSVТУ)

B.Tech In CSE

Grad. 2025 | Current Agg SPI - 6.62

### GOVT. HIGH SEC. SCHOOL PANDARIYA

PCM with Information Technology

Grad. 2020 | Per: 52.8%

## SKILLS

#### Languages:

- Java With DSA
- HTML & CSS
- XML
- python
- Kotlin

#### Tools:

- Git
- Android Studio
- VS Code

#### Framework & Library:

- Pandas
- Numpy
- Tensorflow

#### Technologies:

- Machine learning
- Data Science (Basic)

## INTERESTS

- Gaming
- Photography
- Video Editing

## EXPERIENCE

### PHEONIX HACKATHON

Role: Team Leader | Team size: 4

Developed a Web Application for Student Monitoring System

## PROJECT(S)

#### • Text Summarization using Machine Learning

- Developed an extractive/abstractive text summarization model using NLP techniques.
- Processed and pre-trained on datasets like CNN/DailyMail, XSum for summarization tasks.

#### • Automated Attendance System using Machine Learning

- Developed an automated attendance system using Machine Learning and Deep Learning, OpenCV.
- Implemented Face Detection (Haar cascades, MTCNN) & Recognition (Facenet, Dlib, OpenCV).
- Trained a model using CNN (ResNet, VGGFace, or custom) for accurate face recognition.

#### • T&C Extraction Using ML

Developed an NLP-based model to extract and classify Terms & Conditions from legal documents using TF-IDF & Logistic Regression. Improved automation in legal text processing.

#### • Stock Price Prediction using ML

Built a web-based stock price prediction system using Linear Regression. Historical stock data was collected via the yfinance API and preprocessed using pandas. The model was trained using Scikit-learn, and results were visualized using Chart.js in a Flask-powered web interface.
